## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1 and 2, drawn to control unit of a vehicle, classified in class 322, subclass 28.
- II. Claims 3-6, drawn to a control unit of a vehicle generator, classified in class 322, subclass 24.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as using a vehicle controller having a state detection portion that stops the power generation when the voltage of the battery is not detected. It is not required by invention I to have such feature since in other systems the extra power may be sent to loads or to other back up batteries. It is not necessary to complete stop the power generation of the whole system. Also, invention II requires to stop the power generation by means of switching section which is operated based on an off detection signal indicated of the turning off based on a

key switch. Moreover, a voltage sensing terminal is used to disable the voltage of the battery. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group I, restriction for examination purposes as indicated is proper and because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
